

OMIP, FRUIT PROCESSING HAS BEEN ITS PASSION SINCE 1971

Research, development and innovation applied to the fruit processing machinery

The company O.M.I.P. SRL, established since 1970, specialized in manufacturing machines for fruit processing, has placed on the world market the latest advanced innovations in the sector of pitters for peaches, plums and apricots.

Today, it is proud to present the new revolution in fruit processing:

the Avocado Pitter machine.

The Avocado Pitting Machine Mod. KAV2 with two cutting lines pre-cuts the Avocado separating it into two

halves and allows its pitting*. The machine is suitable to pit fruit even if not perfectly graded. All parts in touch with fruit are for ali-

mentary and hygienic purposes and the structure is completely in stainless steel. Avocados are unloaded into the Feeder and, from it, placed on conveyor belts to the Cutting Station that, thanks to special series of three circular blades, divides the fruits. Then they are downloaded on a special chute for further processings.

Production rate: 200 fruits per minute. Size fruit: from 30 to 80 mm. 🏠

* pitting depends on the fruit variety

40 Years at your service in fruit processing
